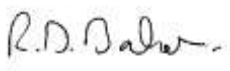
Where the quantity is given as “Present” it normally indicates bat droppings, or other definitive evidence of the presence of bats, found at that location. If the quantity is given as "In Flight" it represents a bat detector record.

Surrey Bat Group works to and supports the best practice outlined in *Bat Mitigation Guidelines*, English Nature, January 2004 and *Bat Surveys – Good Practice Guidelines*, The Bat Conservation Trust, second edition, March 2012. Records supplied by the Group should not be used to infer absence and are no substitute for a site survey carried out at the appropriate time of year in accordance with the above guidelines. Please let us know if we can be of any further assistance.

Yours sincerely,



Ross Baker, Chairman
Surrey Bat Group
